

### Application

The client produce carton printing equipments. machines. It is necessary to install a flow sensor to monitor the ink flow rate of the ink system during printing process.

When the flow rate is too low, the alarm needs to be issued to allow the main system to make corresponding treatment to ensure the normal printing production. The amount of use is determined by the number of axes of the printing equipment.

### Solution

ema FL6301 has a setting of switching output. It is easy to adjust thru the knob. The client only need the alarm of low level. FL6301 not only has a high C/P value, but also meet with customer need.
