

**Application**

The main product of the customer is feed machinery. The rotating paddle level switch need to be reliable. Price and delivery time also matter. Previously used products, because the failure rate of the motor is too high, the customer can not provide maintenance service. Thus, the annual replacement rate is high, the cost is relatively high.

**Solution**

The rotatting paddle level switch is used on the feed tank silo to detect the level of the materials. A good quality of the motor is one of key parts. It provide reliable quality and satisfied lifetime. Each silo is installed 2 switches for high and low level.
