

Application

The client request to measure the level of the tube with pure water inside. Non-contact. Do not pollute the pure water. High and Low level point. Two sensors cannot interacted to each other.

Solution

After discussion with technical engineer, we recommend CD series CD0001 non-contact capacitive level switch. CD0001 can get thru the wall of tube and then detect the liquid without any contact. The container is completely sealed to secure the pure water. The client like it also because of easy setting.
